All for dreams

Servo solutions for continuous and pulse duty applications

Control Techniques' servo solutions provide ultimate performance and flexibility for machinery manufacturers with a wide range of servo drives and motors.

Digitax HD

The Digitax HD range brings ultimate performance to high dynamic, pulse duty applications, where high peak torque is required for fast acceleration.

Unidrive M700

Unidrive M700, with high performance and an extensive power range, is the ideal option for continuous duty applications, where precise, continuous torque delivery is required.

Unimotor

Unimotor is a comprehensive family of high performance AC brushless servo motors. With a wide torque and speed range, and a broad selection of feedback options, Unimotor offers the perfect match for Digitax HD and Unidrive M700 to meet any application requirement.

SERVO DRIVE SERIES

Digitax HD

Optimized for high-dynamic applications, Digitax HD provides the flexibility of both standalone and modular configurations. The drive offers full servo control plus open loop permanent magnet and induction motor control across four functionality levels: EtherCAT, MCI machine control, multiprotocol EtherNet and the flexible Base drive.

Unimotor HD

Unimotor HD is Control Techniques' highly dynamic brushless AC servo motor range. With high peak torque, low inertia and compact dimensions, Unimotor HD is optimized for applications requiring rapid acceleration and deceleration.

Actual size

Just 40 mm (1.6 in)

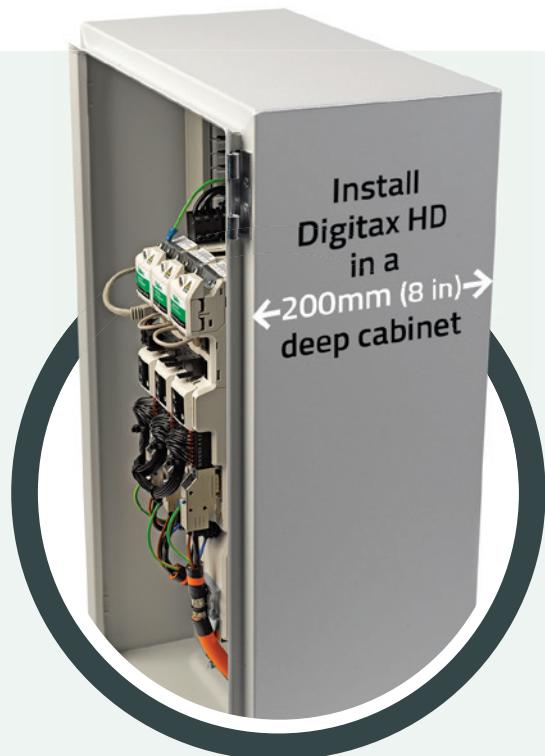

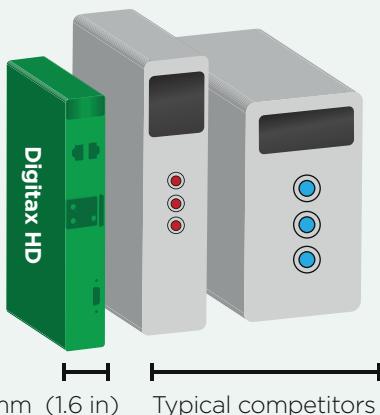

Minimum size servo solutions

Reduce cost and maximize floor space

Minimal footprint and exceptional power density make Digitax HD one of the **smallest servo drives** on the market today. This means that you can build the most compact cabinets possible.

The market's narrowest servo drive

- Digitax HD is just 40mm (1.6 in) wide
- 25 drives, up to 16A per drive, can fit in just 1 meter (40 in) of cabinet space

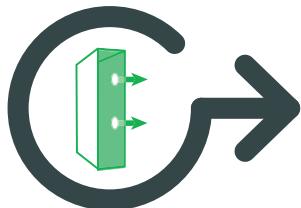

Drive dimensions

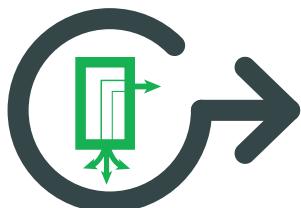

Dimensions	Frame 1		Frame 2		Frame 3	
	in	mm	in	mm	in	mm
Width	1.57	40	1.57	40	1.57	40
Depth	6.85	174	6.85	174	6.85	174
Height	9.17	233	11.0	278	12.9	328
Nominal current @ 400 V	4.2 A		10.5 A		12.9 A	
Peak current @ 400 V	12.6 A		31.5 A		48 A	

Further reduce cabinet size with Ultraflow™ thermal management

Reduce cabinet height by directly stacking rows of drives. Control Techniques' patented Ultraflow™ technology expels heat directly outside of the cabinet through the rear of the drive* and removes heat build-up in the cabinet.

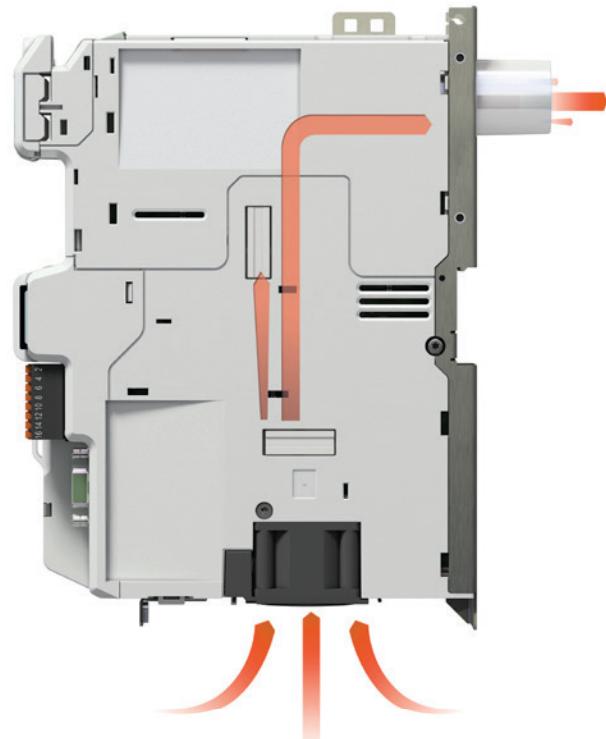

Ultraflow™'s guided internal airflow prevents ingress on drive circuits and, combined with conformal coating, minimizes contamination risk.

An intelligently controlled fan optimizes fan lifetime and minimizes acoustic noise, while contributing to the maximum thermal cooling by Ultraflow™.

Ultraflow™ requires only a 32 mm (1.25 in) hole in the cabinet meaning rapid, trouble-free installation**

Ultraflow™ is a registered Trademark of Control Techniques

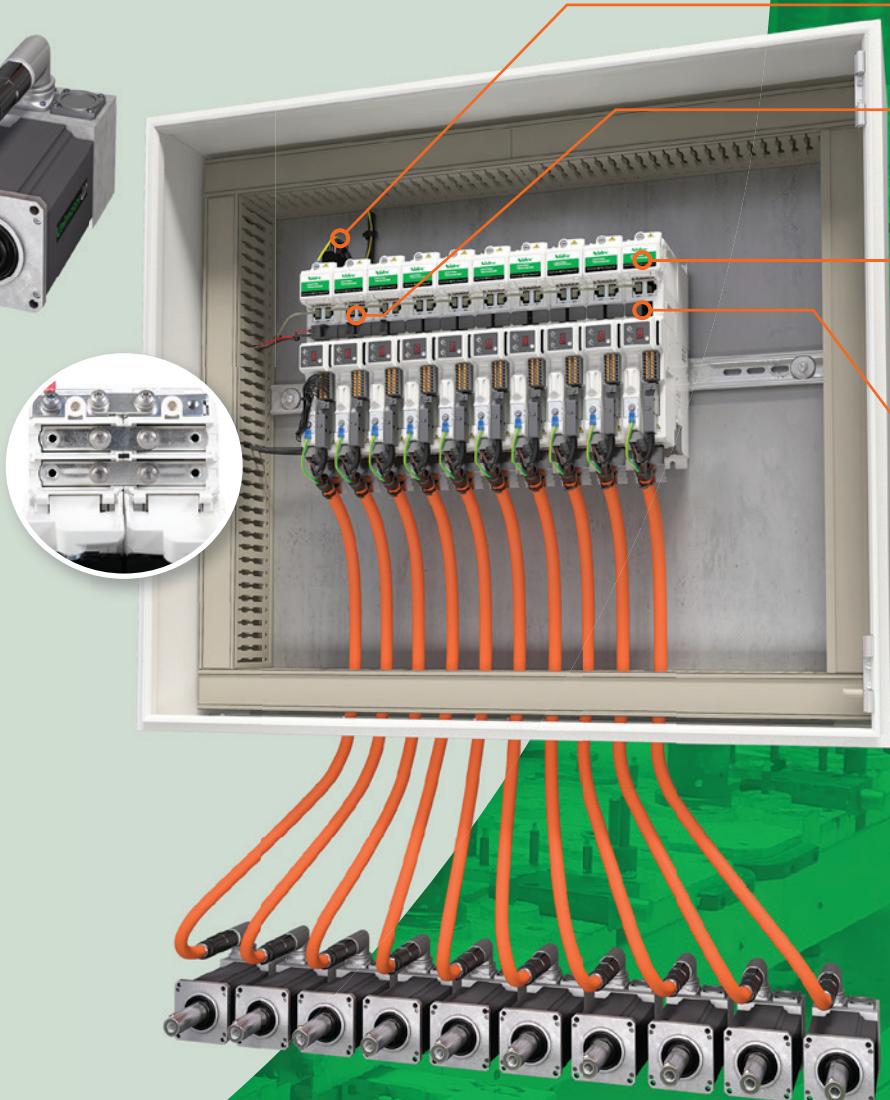

* Drive heat dissipation can also be achieved via vents on top of the drive, as standard.

** Frames 2 and 3 require 2 x 32mm (1.5 in) holes

PERFORMANCE

SPEED

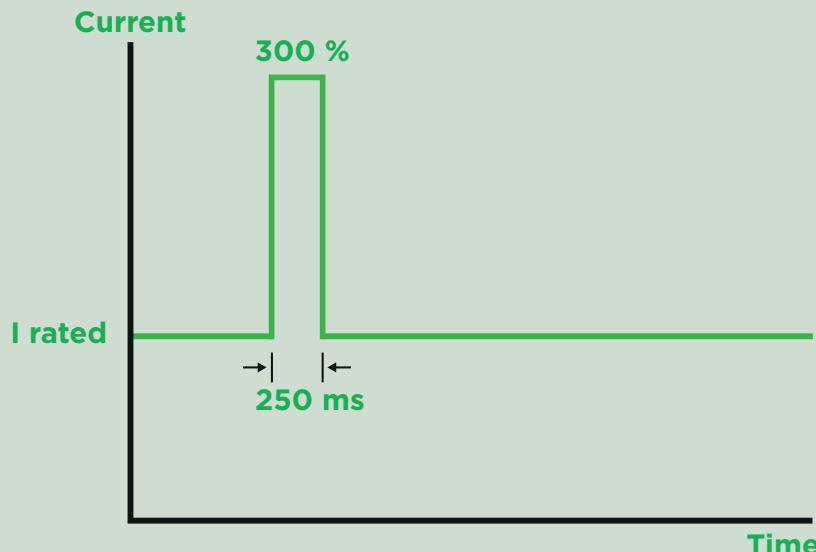

PRECISION

Maximum performance servo solutions

Boost throughput with maximum control

Optimized for highly-dynamic applications and with high speed control loops, Digitax HD brings maximum throughput and production quality to your machines.

- 300% peak current performance
- Optimized control loops for high dynamic performance
 - 62.5 µs current loop
 - 250 µs position and speed loop
- Unique 'dead beat' current controller for maximum bandwidth
- Up to 16 kHz switching frequency (default ratings specified at 8 kHz)
- Advanced bi-quad filters for suppression of mechanical resonances

Improving accuracy through precision encoder feedback

The flexible speed and position feedback interface supports a wide range of feedback technologies, from robust resolvers to high resolution encoders.

- Up to three onboard encoder channels simultaneously e.g. 1 feedback encoder, 1 reference encoder and 1 simulated output
- Quadrature, AB Servo, SinCos (including absolute), SSI, BiSS, EnDat 2.1/2.2, Hiperface and resolvers
- Simulated encoder output can provide position reference for cams, digital lock and electronic gearbox
- Up to 25 bit encoder resolution
- Feedback accuracy as low as ±20"

motor and drive

Rapid installation and commissioning

The multi-axis paralleling kit includes busbars for quick connection of DC bus and earth link, as well as Quick Links to distribute 24 Vdc supply across drives.

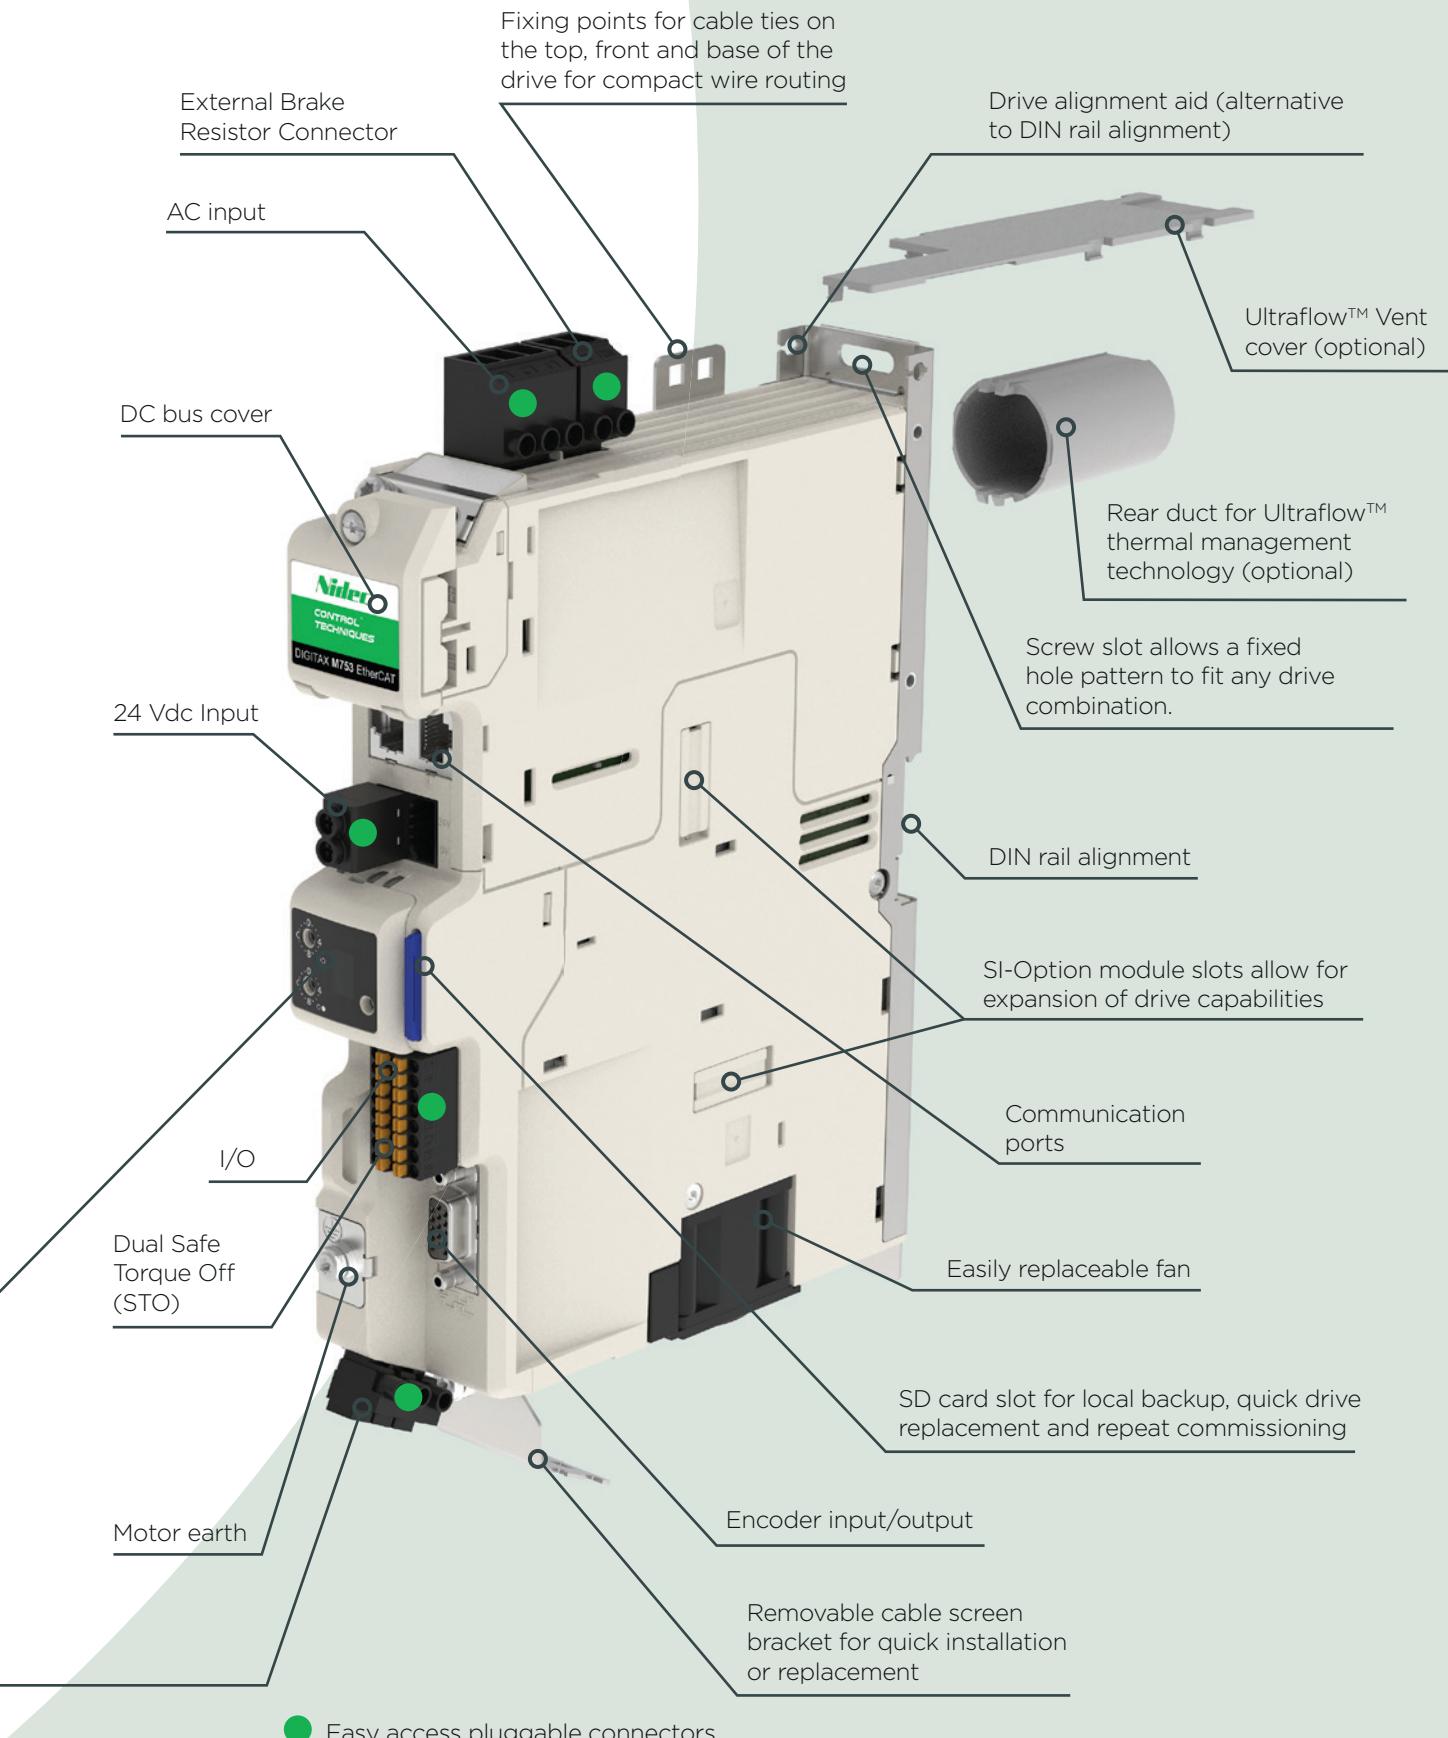

- Reduces installation time and cost
- Improves energy efficiency and footprint

The LED display ensures access to drive diagnostics even in the absence of network connectivity.

Includes 2 rotary switches for hardware setting of the node address for faster commissioning of the motion network.

The motor power connector is in the same position for all frame sizes, making cable routing easier and tidier.

● Easy access pluggable connectors

SOFTWARE

Fast programming and commissioning

Application Programming Machine Control Studio

The Machine Control Studio programming environment provides a flexible and intuitive environment for programming automation and motion control features.

The software provides programming for:

- Onboard PLC
- MCi200 or MCi210 integrated machine control modules
- EtherNet network data configurations

Familiar automation programming languages

The programming environment is fully IEC 61131-3 compliant and therefore familiar, fast and easy to use for control engineers around the world.

The following IEC 61131-3 programming languages are supported:

- Structured Text (ST)
- Function Block Diagram (FBD)
- Structured Function Chart (SFC)
- Ladder Diagram (LD)
- Instruction List (IL)
- Continuous Function Chart (CFC)

Productivity features also supported:

- Intuitive IntelliSense functionality helps to write consistent and robust programs speeding up software development
- Programmers have access to a vibrant Open-source community for function blocks
- Machine Control Studio also supports customers' own function block libraries

Features	Digitax HD onboard PLC	MCi Option Module
Breakpoints	-	Yes
Source code upload/download	-	Yes
Online change	-	Yes
Trigonometric functions	-	Yes
64 bit data types	-	Yes
Real-time task(s)	Yes (min 4ms)	Yes (min 250 µs)
Customizable drive menu	Yes	Yes
Variable tracing	-	Yes
Tasks available	1 x Freewheeling task, 1 x Position task, 1 x Initial task, 4 x Clock tasks, 1 x Error task, 4 x Event tasks	1 x Freewheeling task, 1 x Position task, 1 x Initial task, 4 x Clock tasks, 1 x Error task, 4 x Event tasks
Centralized controller	-	Yes
Decentralized controller	Yes	Yes

Commissioning Connect

The Connect PC tool is for rapid commissioning, plus optimizing and monitoring drive/system performance.

- Task-based drive operations are simplified with intuitive graphical tools in a familiar Windows environment
- CTScope - a realtime software oscilloscope - facilitates tuning and monitoring
- Dynamic logic diagrams and searchable parameter listings
- Tool is scalable, through optional add-ins, to match application requirements
- Multiple communications channels for a more complete overview of the system
- Drive discovery gives the ability to find drives on a network automatically without the user having to specify their addresses
- Offline configuration

SD card

Standard SD cards can be used for quick and easy parameter and program storage.

Motion Control System Architecture

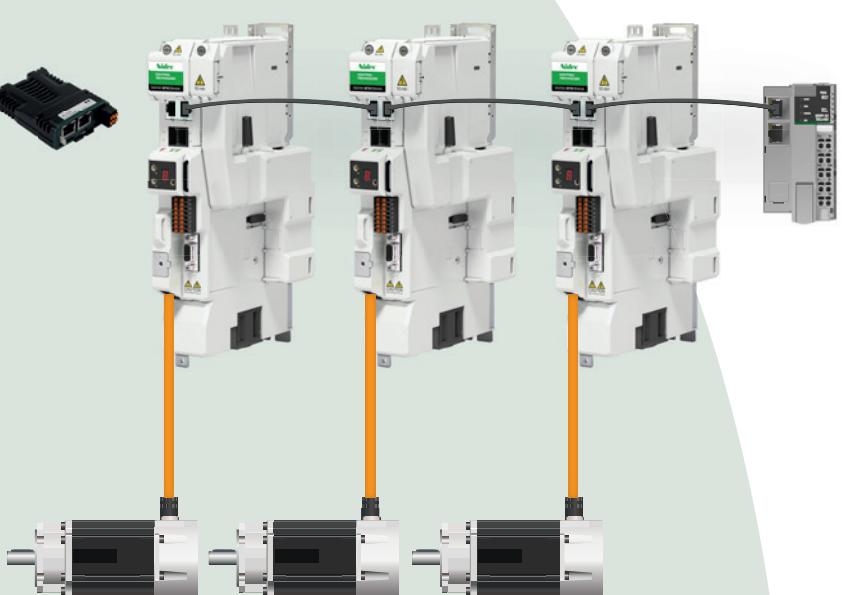

Drive-based Motion (Decentralised/Distributed Motion Intelligence)

In a distributed motion control system, the motion control capability is distributed on-board the individual drives. This includes the position loop, motion profile and sometimes even all or part of the PLC logic.

- Each axis is fully independent, but coordination can be achieved by synchronizing drives over the network using Real-Time Motion over EtherNet (RTMoE).
- In small machines, a drive-based system can be standalone, whereas in larger systems it is more commonly connected to a PLC (or IPC) over a fieldbus which, in this case, does not need to be strictly deterministic.

Key advantages

- A drive-based system offers superior motor control performance, as the on-board loops typically run faster, and it avoids the delays of network communication.
- A distributed motion architecture can be very cost-effective, as it forgoes the need of an expensive central motion controller and, by using the onboard logic, allows to take some load off the central PLC.
- It is easily scalable, as the load of the PLC, where present, does not increase significantly with the number of drives connected.
- PC Tools provide similar ease of commissioning and maintenance to a centralised solution.

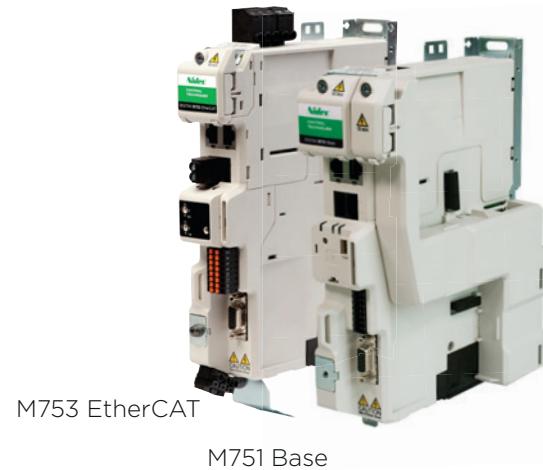

Controller-based Motion (Centralized Motion Intelligence)

A central controller generates the motion profiles of all axes and in some cases even closes the position loop. In this architecture the servo drives, often referred to as amplifiers, simply follow the setpoint they receive from the controller.

- The servo drives are normally connected over an EtherNet network, using a fast and deterministic protocol such as EtherCAT.
- In modern systems, the central controller, PLC-based or IPC-based, tends to also implement all the machine logic.

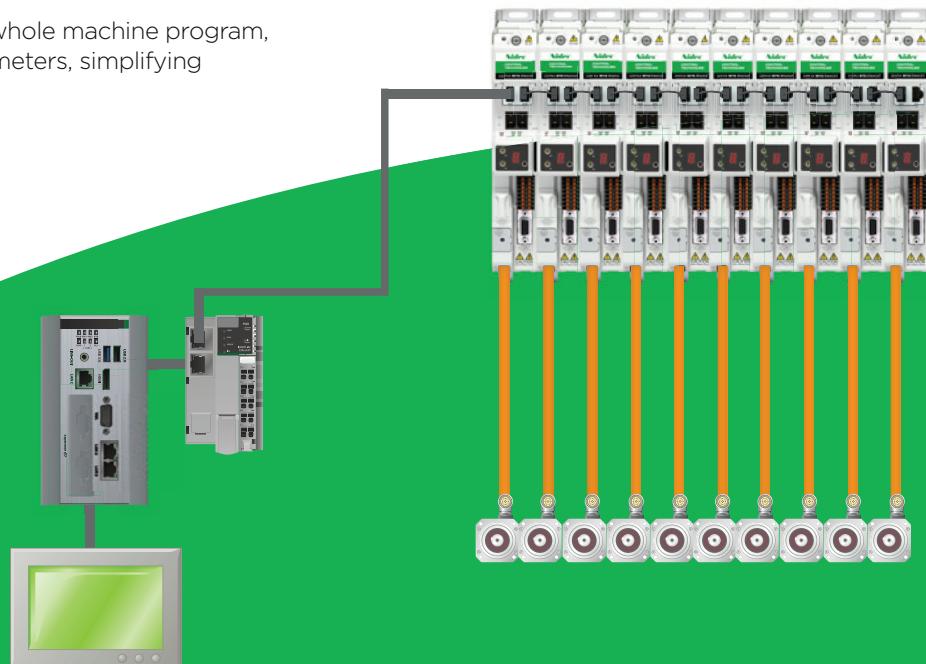

Key advantages

- Ease of coordinating the motion of multiple axes in a single program.
- Single storage location for the whole machine program, and potentially even drive parameters, simplifying maintenance.

M753 EtherCAT

M751 Base

M750 EtherNet (multiprotocol)

Network drive for centralized and decentralized motion application

Digitax M750 EtherNet

Onboard multiprotocol EtherNet, supporting Real Time Motion over EtherNet (RTMoE), EtherNet/IP, Modbus TCP/IP and PROFINET RT

Onboard advanced motion controller for 1.5 axis motion control

EtherNet webpages hosted onboard the M750 EtherNet drive

Reduced downtime with machine safety

- Integrated Dual Safe Torque Off
- Meets SIL3 and PLe

RTMoE

Digitax HD's standard EtherNet supports RTMoE (Real-Time Motion over EtherNet) which provides synchronized communication between drives using the Precision Time Protocol as defined by IEEE1588 V2:

Distributed clocks are used to automatically synchronize the position, speed and current loops across all drives

High speed network synchronization of less than 1 µs jitter (typically <200 ns) and 1 ms cycle time for synchronous cyclic data

Advanced Motion Controller onboard

Advanced 1.5 axes motion controller, key features include:

- 250 µs cycle time
- Motion profile generator
- Electronic gearbox
- Interpolated cam
- Homing functions
- High speed position freeze

SIL3 PLe
Safety Integrity Level

RTMoE

Machine controllers MCi200 & MCi210

Second processor for PLC programs and multi-axis control

MCi200 and MCi210 modules add a powerful processor to Digitax HD. They extend the drives system and machine control capability to run application programs up to four times faster than a standard PLC.

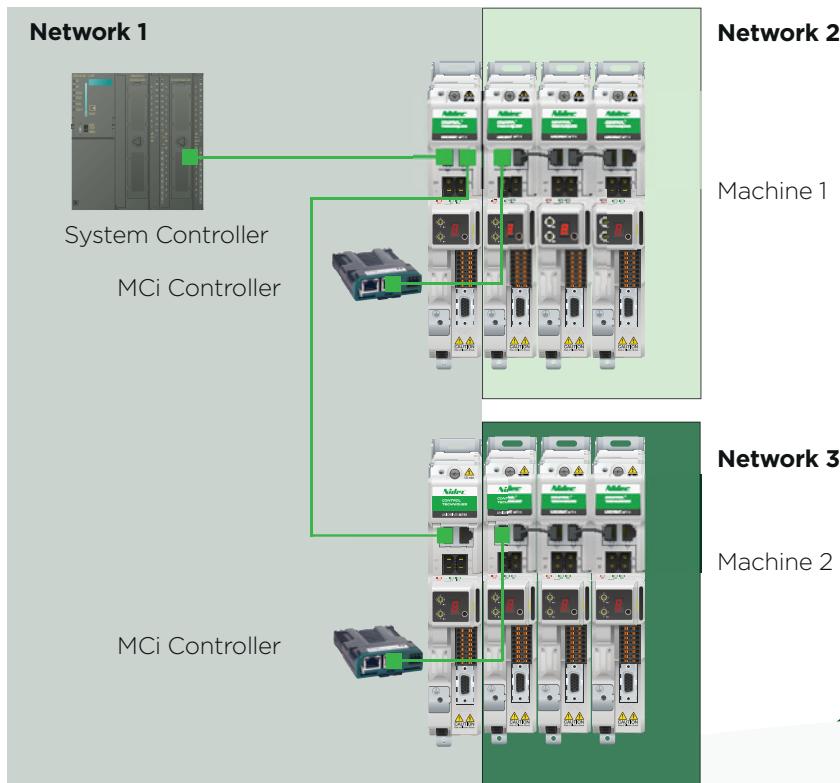

Programs are fast and easy to develop thanks to the user-friendly Machine Control Studio software which uses industry standard IEC 61131-3 programming languages.

MCi programs can access and manage the drive embedded Advanced Motion Controller, providing perfectly synchronized multi-axis machine performance.

- Two EtherNet ports with an internal switch
- Support for standard EtherNet protocols
- RTMoE for synchronized cyclic data at 250 µs
- Modbus TCP/IP master
- Machine control over two segregated EtherNet networks enables greater flexibility in machine design
- Extended fast I/O (3 x digital inputs, 1 x digital output, 1 x digital I/O)

Segregated network control

M751 Base

Base drive for configuration flexibility

Digitax M751 flexibility

Two option slots for functionality extension and customization – refer to page 21 for the comprehensive option module list

Built-in Modbus RTU over RS485 communications

Onboard Advanced Motion Controller for 1.5 axis motion control

Analog and pulse/direction control for centralized motion

Reduced downtime with machine safety

- Integrated Dual Safe Torque Off
- Meets SIL3 and PLe

Advanced Motion Controller onboard

Advanced 1.5 axes motion controller, key features include:

- 250 µs cycle time
- Motion profile generator
- Electronic gearbox
- Interpolated cam
- Homing functions
- High speed position freeze

M753 EtherCAT

EtherCAT drive for centralized motion control applications

Digitax M753 EtherCAT

Digitax M753 features an integrated 2-port EtherCAT switch for easy integration in centralized motion control applications

EoE (EtherNet over EtherCAT) support allows PC tool connection for commissioning and monitoring over the EtherCAT network

The station alias can be dynamically assigned by the EtherCAT master, or hardwired with the two rotary switches built into the display

An optional RS485 adaptor is available, providing a back-up PC tool connection in case of network failure

High performance with flexibility

Operate with any automation product via EtherCAT

- Operate with motion controllers, motion PLCs and Industrial PCs via built-in EtherCAT
- Dual 100Mbps EtherCAT interfaces for use with in-line topologies
- Non-cyclic data communication using the CoE mailbox

Flexibility for all applications achieved through full access to drive functions

- CANopen over EtherCAT (CoE) including:
 - > CIA-402 profile
 - > Cyclic sync position mode
 - > Interpolated position mode
 - > Velocity mode
 - > Profile torque mode
 - > SDO access to all profile objects and drive parameters

Reduced downtime with machine safety

- Integrated Dual Safe Torque Off
- Meets SIL3 and PLe

EtherCAT® → SIL3 PLe
Safety Integrity Level

Option module flexibility

Adding the option mounting kit **only adds an additional 22 mm (0.86 in) width**, providing a maximum drive width of 62 mm (2.44 in).

Our innovative design means you only increase drive size when option modules are used, therefore **achieving significant space saving** in the overall configuration.

Option modules

Digitax HD supports a range of communications, I/O, feedback and machine control option modules.

Feedback

SI-Universal Encoder

Encoder input and output interface supporting Quadrature, SinCos, EnDat and SSI encoders.

SI-Encoder

Quadrature encoder input interface module.

I/O

SI-I/O

Extended I/O interface module to increase the number of analog and digital I/O points on the drive.

Communications

SI-EtherCAT

SI-PROFINET

SI-EtherNet*

SI-DeviceNet

SI-CANopen

SI-PROFIBUS

Applications with PLC or Motion Functionality

MCi200

Advanced machine control using industry standard IEC61131-3 programming languages

MCi210

Extended advanced machine control using industry standard IEC61131-3 programming languages and integrated EtherNet connectivity

SI-Apps Compact

Compatible module allows legacy SyPTPro application programs to be re-compiled for Digitax HD

* Support of real-time EtherNet (RTMoE), HTTP, SMTP, EtherNet/IP and Modbus TCP/IP

Unimotor HD High dynamic servo motor for pulse duty applications

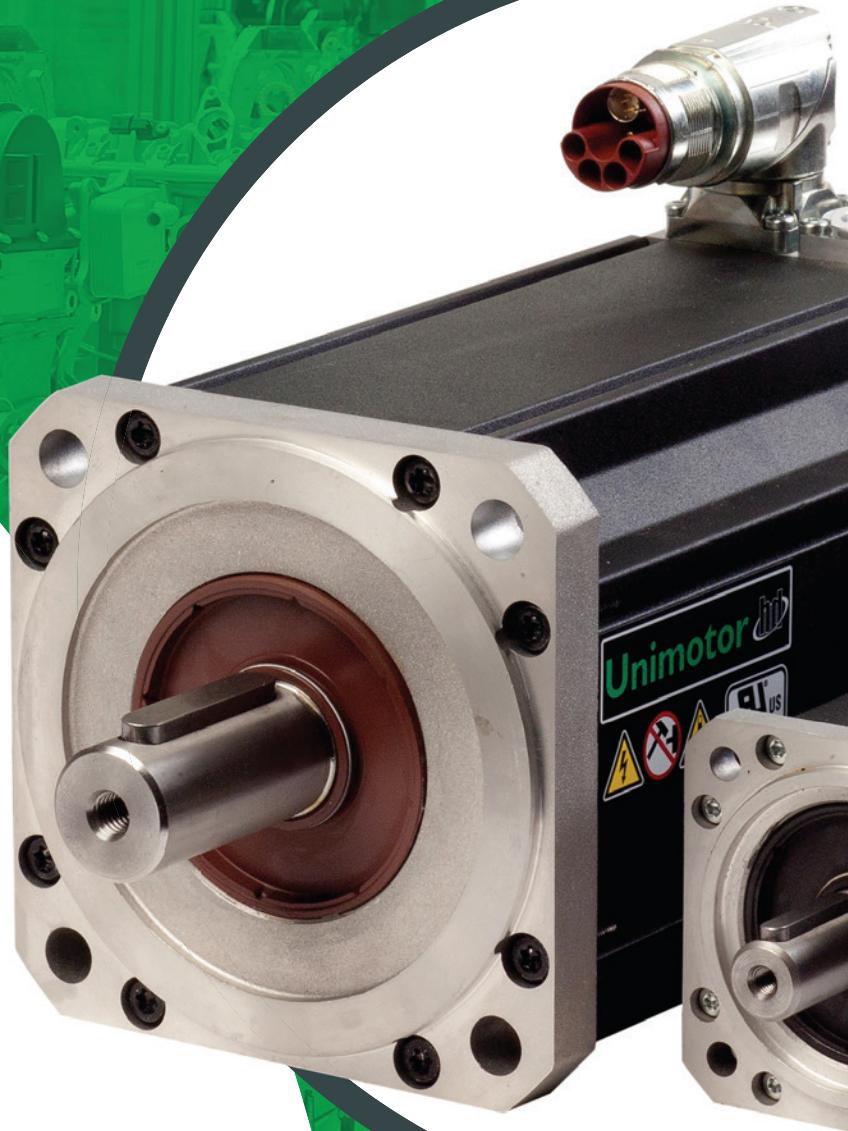

- Patented rotor technology – High torque to inertia ratio for high dynamic performance
- Compact but powerful
- Parking brake available
- IP65 conformance: sealed against water spray and dust when mounted and connected
- Segmented stator design for high power density and compactness
- Supported by rigorous testing for performance and reliability
- Windings to suit 400 V and 200 V
- Rated speeds include 1,000 rpm – 6,000 rpm depending on motor size
- Customized motor build available

0.7 Nm to 85.0 Nm (6.2 lb-in to 752 lb-in) and up to 300% overload

Unimotor HD is a high dynamic brushless AC servo motor range designed for use in pulse duty applications where rapid acceleration and deceleration is required.

High torque to inertia ratio

Unimotor HD has a high power to weight ratio, meaning that it can be easily integrated into the smallest, most demanding applications such as industrial robotics, pick & place and packaging.

Digitax HD & Unimotor HD motor and drive combinations

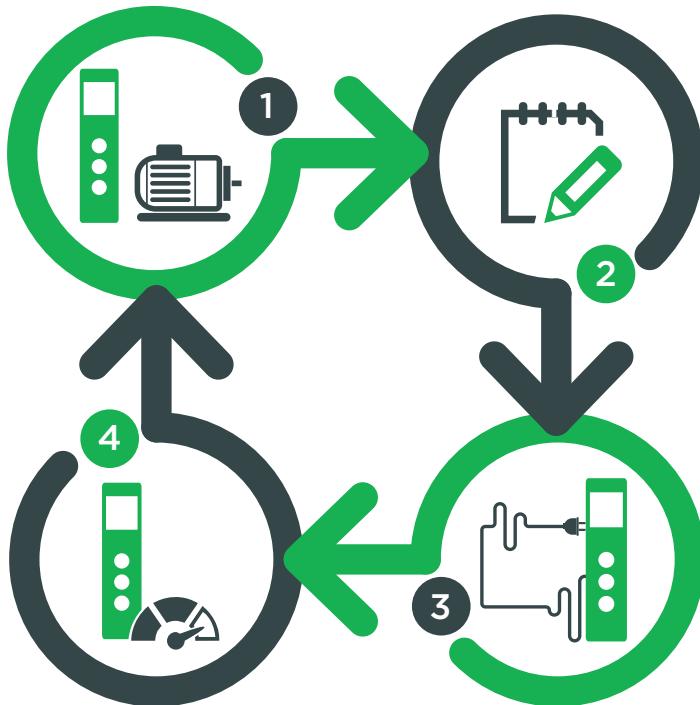

400 V range - 0.7 to 51 Nm (6.2 to 451 lb-in) with 300% peak stall torque

200 V range - 0.7 to 45 Nm (6.2 to 398 lb-in) with 300% peak stall torque

Modular multi-axis configuration

Dimensioning the common DC bus

4 easy steps to accurately dimension your system

- 1 Choose drive & motor combination based on speed and torque requirements see pages 25 and 26
- 2 Note nominal power & drive capacitance for each combination
- 3 Choose the drive to act as power supply for the drive group Usually the largest drive
- 4 Check that:
 1. sum of drive capacitance \leq maximum capacitance**
 2. sum of nominal power \leq maximum input power**

(Refer to tables below)

Digitax HD drives have a high capacity input power stage, allowing for a group of drives on a common DC bus to be powered by a single AC connection.

Alternatively, for larger configurations an external DC source can be used, such as a larger frame Unidrive M.

NOTE: The number of drives that can be connected on a common DC bus group depends on the total installed capacitance, the power rating of the input stage and the power profile of each axis.

There is also a limit of 10 drives for the 24 Vdc link.

ADDITIONAL INFORMATION:

For optimized dimensioning please refer to the Installation and Technical Guide.

* External AC Line Reactor required. Please refer to the Installation and Technical Guide.

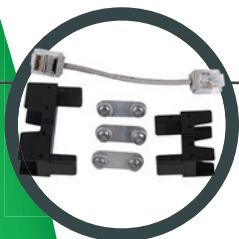

** If any of the values are exceeded, the system needs to be split in groups and the procedure repeated for each group.

M75C CapShare Capacitor Module

M75C Capabilities

Available in 200 V and 400 V variants, the M75C CapShare Capacitor Module is contained within a M75x Frame 1 chassis measuring 40mm width. M75C CapShare is designed for use in multi-axis applications to offer:

- Robustness against fluctuations in power supply, increasing the ability to ride through brief mains losses
- Dynamic performance with quick-access energy storage for fast acceleration / deceleration
- Energy efficiency as more energy can be stored, rather than dissipated into heat

Multiple M75C CapShare units can be paralleled in a scalable architecture, which is also quick and easy to install with DIN rail alignment, and easy DC bus paralleling.

M75C CapShare Capacitor Module		
Part Number	M75C-01201740	M75C-01400725
Rated Voltage	200 V	400 V
Onboard capacitance	1740 µF	725 µF

Maximum cable length refer to page 34

Signal cable part number key:

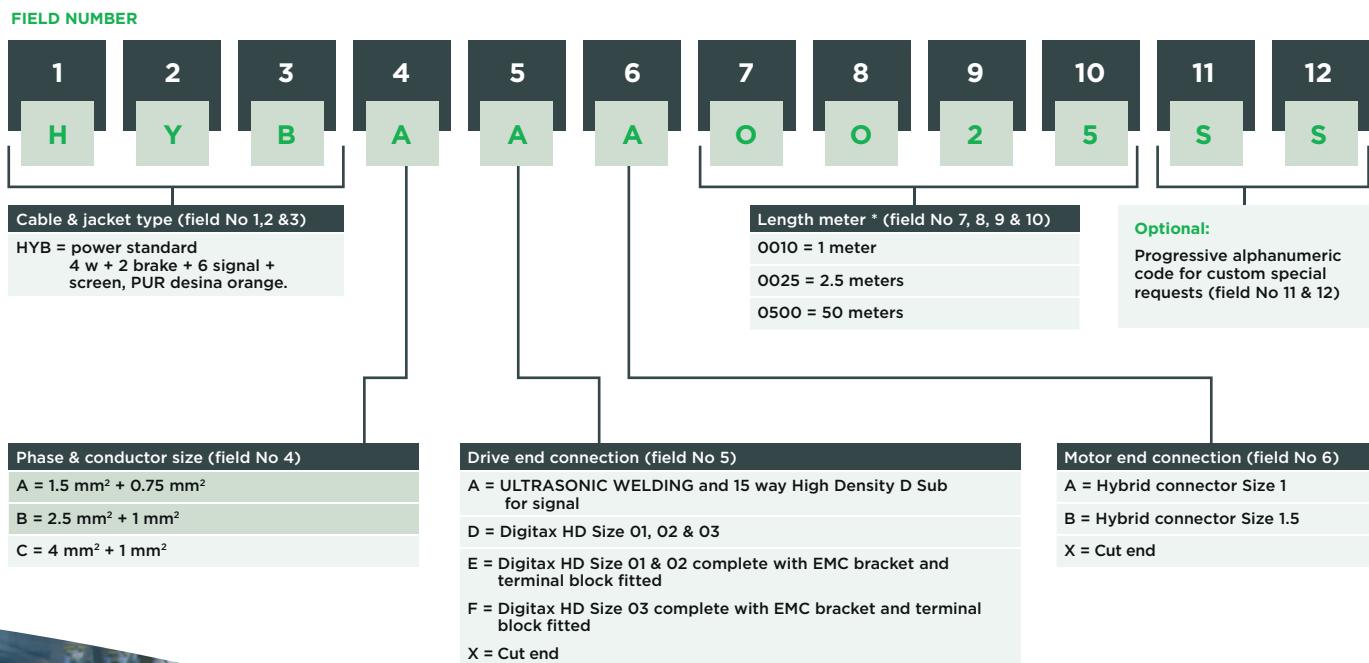

* Length meter/cable requiring (cm) lengths will be rounded up to the next highest half meter; Eg. 2.1 will be changed to a 2.5 meter cable.

Maximum cable length refer to page 34

Cables and connections

Hybrid cable part number key:

* Length meter / cable requiring (cm) lengths will be rounded up to the next highest half meter; Eg. 2.1 will be changed to a 2.5 meter cable
Maximum cable assembly length refer to table below

Digitax HD

Servo series specification

		M753 EtherCAT	M751 Base	M750 EtherNet	M751 + MCi210
Performance	Update Rates	Current Loop Update: 62 µs			
		Speed Loop Update: 250 µs			
		Position Loop Update: 250 µs			
	Overload	*Closed-loop Overload: Maximum closed loop peak current for 0.25 s (from cold: 300 % for 8 s or 200 % for 60 s)			
		*Open-loop Overload: Maximum open loop peak current for 8 s (from cold: 150 % for 100 s)			
	Max Output Frequency	550 Hz (RFC-A and RFC-S) 599 Hz (Open Loop)			
	Switching Frequency	Configurable range: 2, 3, 4, 6, 8, 12, 16 kHz			
		Default: 8kHz			
	Adjustable Venting	Top venting or rear venting (with optional kit)			
	Intelligent Fan Control	Temperature controlled fan operation with user adjustable speed limit			
	Managed Internal Airflow	Managed airflow for maximum ingress protection			
Onboard Intelligence	Motion	Advanced Motion Controller			MCi210
		Parameterised motion			Programmable motion
		1.5 Axes			Up to 5 Axes
		Positioning digital lock control			Positioning digital lock control camming
	PLC	Real-time tasks			
		Onboard PLC			Onboard Machine Controller
		IEC61131-3 programming (IL, LD, FBD, SFC, ST, CFC)			
Control	Motor Control Modes	V/F, Open loop vector, Rotor flux control-Asynchronous for induction motors (Sensorless or with feedback 'Closed Loop'), Rotor flux control-Synchronous (Sensorless or with feedback 'Closed Loop')			
	Control Modes	Position control, speed control, torque control			
	Control Features	Stationary autotune for permanent magnet motors			
		Advanced bi-quad filters for suppression of mechanical resonances			
Interface	Onboard Communications	2-port EtherCAT switch	2-port RS485	2-port EtherNet switch	2-port RS 485 2-port EtherNet switch
	Fieldbus	EtherCAT	Modbus RTU	Modbus RTU, Modbus TCP/IP, EtherNet/IP, PROFINET RT	Modbus RTU, Modbus TCP/IP, EtherNet/IP
	Real Time Motion	EtherCAT (CoE)	None	RTMoE	RTMoE
	Analog I/O	1 Analog Input ± 10V, 12 bits (11 bits + sign)			
	Digital I/O	2 DI, 2 DO (100 mA), 1 motor brake output (1 A, max 1.3 A)			
	Pulse Train Input	Frequency/Direction 5 V differential, 500 kHz			
	Encoder Feedback	2 x Encoder input and 1 simulated encoder output			
	Supported Encoders	Resolver, Quadrature, AB Servo, SinCos, EnDat (2.1/2.2),SSI, BiSS, Hiperface			
	Safety	2 x Safe Torque Off (STO) via terminal, PLe, SIL3			
	Interface	EtherNet over EtherCAT (EoE)	RS485	EtherNet	RS485 / EtherNet
Commissioning	Commissioning Tool	Connect			
	Motion Programming Tool	-	Machine Control Studio		
General	Mechanical Attributes	Removable cable screen clamp			
		User replaceable fan(s)			
		Conformal coating			
	Backup	SD Card			
		Electronic motor nameplate parameter storage (HIPERFACE, Endat 2.2)			
	Braking	Braking resistor: external / drive mountable			
		Braking chopper: integrated			
	Multi-axis	Busbars for common DC bus and earthing			
		Quick Links for 24 V distribution			
		Common braking resistor			
	Display	Yes	Optional	Yes	Optional

RFC-S: Rotor Flux Control for Synchronous (permanent magnet brushless) motors
 RFC-A: Rotor Flux Control for Asynchronous (induction) motors

* The stated percentages apply only to three phase continuous current

* External AC line reactor required.

Environment, safety and electrical conformance

Environment

IP rating: M75x drives are rated to IP20 (dry, non-conductive contamination)

UL open class

Ambient temperature -20 °C (-4 °F) to 40 °C (104 °F) as standard. Up to 55 °C (131°F) with derating

Humidity 95 % maximum (non-condensing) at 40 °C (104 °F)

1,000 m to 3,000 m (3,300 ft to 9,900 ft) above sea level: de-rate the maximum output current from the specified figure by 1% per 100 m (330 ft) above 1,000 m (3,300 ft)

Storage temperature -40 °C (-40 °F) to 70 °C (158 °F)

Mechanical Shock Tested in accordance with IEC 60068-2-27

Random Vibration: Tested in accordance with IEC 60068-2-64

Safety

Safe Torque Off independently assessed by TÜV to IEC 61800-5-2

SIL 3 and EN ISO 13849-1 PLE

UL 61800-5-1 (Electrical Safety)

Electrical conformance

Electromagnetic Immunity complies with EN 61800-3 and EN 61000-6-2

With onboard EMC filters, complies with EN 61800-3 (2nd environment)

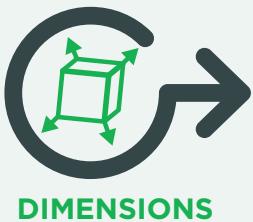

EN 61000-6-3 and EN 61000-6-4 with optional EMC filter

IEC 60146-1-1 supply conditions

IEC 61800-5-1 (Electrical Safety)

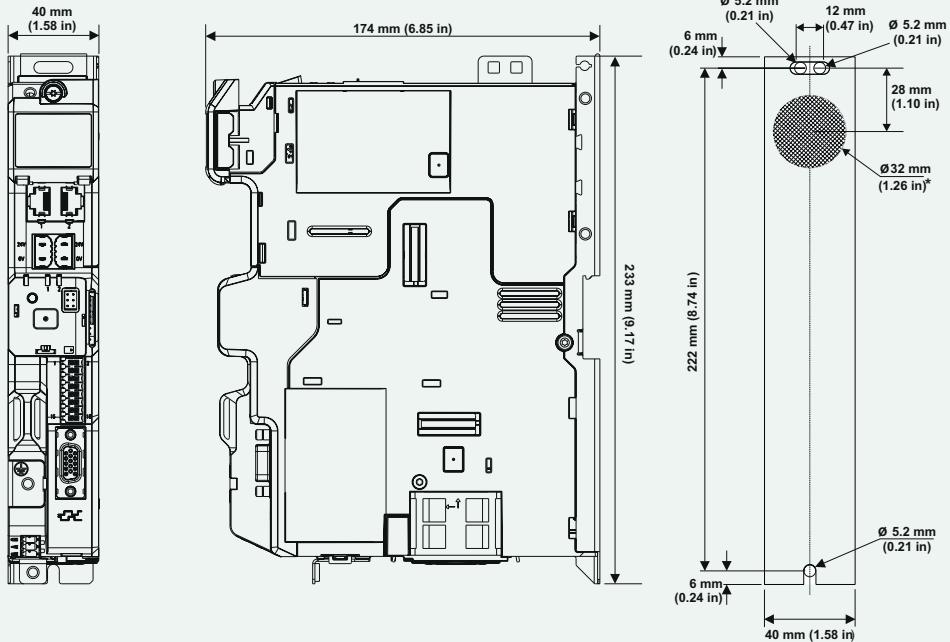

IEC 61131-2 I/O

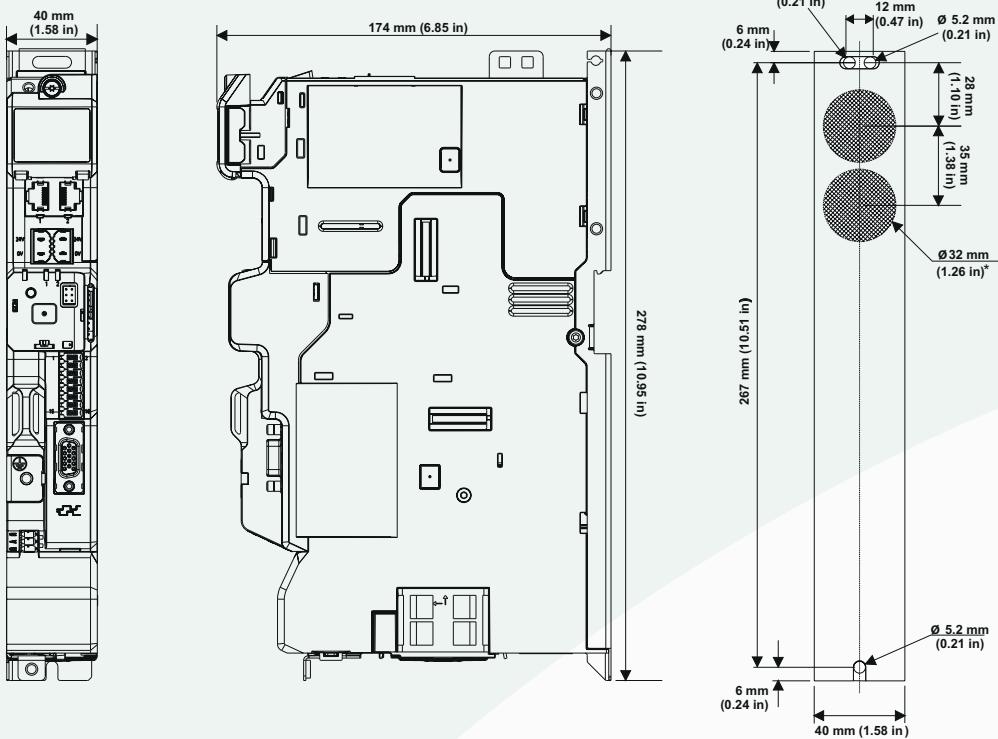

Digitax HD & Unimotor HD dimensions

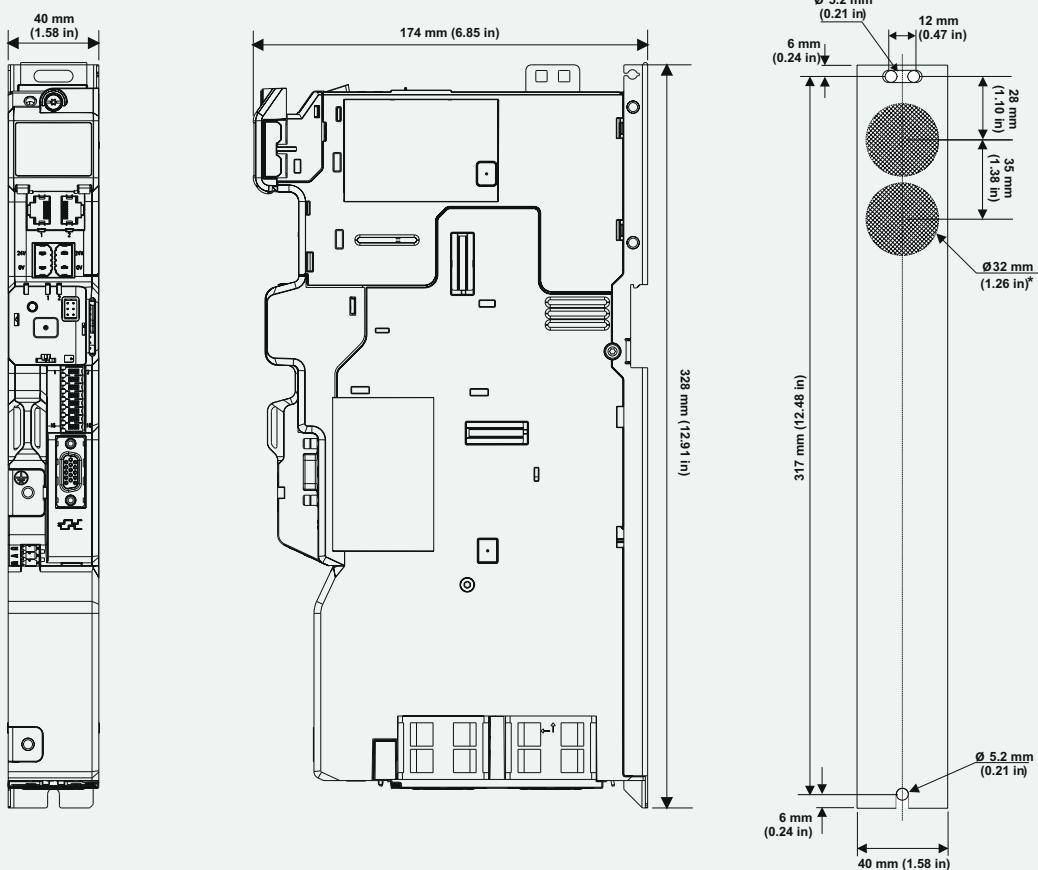

Frame 1

Frame 2

Frame 3

Notes:

- Additional space above and below the drive may be required for cable routing.
- Option module frame adds 22mm width.
- Alternative screw mounting options available. Please refer to the Installation Guide.

All for dreams

#1 for advanced motor and drive technology

Nidec Corporation is a global manufacturer of electric motors and drives. Founded in 1973, Nidec has worldwide operations and a workforce of more than 110,000 who develop, manufacture and install motors, drives and control systems in industrial plants, automobiles, home appliances, office equipment and information technology.

CONTROL TECHNIQUES™

DRIVE SPECIALISTS SINCE 1973

Drives: they're what we do. Whether you're designing a new machine or installing a replacement, we know you need quick delivery and an easy set up, with the confidence that your drive's going to keep on performing with accurate control.

So leave it to the specialists. We've dedicated ourselves to designing and manufacturing variable speed drives since 1973. This means quick set up, high reliability, maximum motor control and fast, efficient service.

Outstanding performance

The outstanding performance of our drives is the fruit of over 45 years of engineering experience in drive design.

Technology you can rely on

Robust design and the highest build quality ensure the enduring reliability of the millions of drives installed around the world.

Open design architecture

Based on open design architecture, our drives integrate with all primary communication protocols.

Embedded intelligence

Precision motor control is combined with high performance embedded intelligence, ensuring maximum productivity and efficiency of your machinery.

Global reach, local support

Highly experienced, locally based Application Engineers design and support drive technology to provide maximum value, wherever you are in the world.

A part of the Nidec Group

Connect with us at:
